

REPLACEMENT AND IMPROVEMENT OF ACCESS POINTS

Secure and fluid access to the shopping center

Our strenghts:

- Tailor-made solutions
- Optimized customer flow
- Enhanced user experience
- Adaptation to existing structure

The shopping center wanted to make access more fluid, while preserving the existing structure.

The Saint-Just-en-Chaussée shopping center, which covers an area of 6,500 sq.m. and welcomes almost 2,500 customers a day, was initially equipped with two revolving doors that were unsuitable for carts and often prone to breakdowns. To improve access, the Director chose to replace these installations with custom-made round automatic SAS doors, with four fixed leaves and two moving leaves to fluidify passage.

To ensure the longevity and reliability of the new doors, Portalp proposed a regional maintenance contract, available 24/7, including a fiveyear extended warranty. This offer completes the service Portalp provides its customers throughout their projects.

COUNTRY: France

CITY: Saint-Just-en-Chaussée

MARKET: Retail

SOLUTIONS: 2 automatic SAS doors, each with 4 fixed leaves and 2 moving leaves

PROJECT DURATION: 12 weeks

FUNCTIONAL REQUIREMENTS:

- Technical adaptation to the diameter of the 2 existing curved structures
- Made-to-measure
- Access security

Production center with a certified management system
