

Renovation of automated access for the Marriott hotel in India

Customer benefits:

- Respect and preservation of the building's architecture
- Modernization and automation of access points
- Enhancement of the customer experience

Located in the central business district of Bengaluru, India, the Marriott Executive Apartments UB City is a prestigious five-star hotel offering 190 luxury apartments and top-notch hospitality services.

As part of the renovation of its main entrance, the owners made the wise decision to collaborate with Portalp, a company renowned for its expertise in the manufacture of oversized doors, in partnership with Ambica, our partner in India.

This project represents a significant large-scale challenge, involving exceptional glazing dimensions of 2,400 x 4,200 mm and a thickness of 12 mm, while being designed in harmony with the existing façade. This automatic door is the tallest ever installed in India.
